**bituminous waterproofing membrane production line**

EUROLINE manufactures various types of production line for bituminous waterproofing membrane:
- line for the production of APP-SBS modified bitumen membranes or oxidized bitumen sheets
- line for the production of self-adhesive membranes with or without reinforcement;
- line for bituminous-asphalt roof underlayment
- line for bitumen shingles

The EUROLINE production line is the top of the technology with a high level of automation and a lot of other advantages:
- High efficiency
- High speed
- Excellent quality for the waterproofing membranes
- Only two man-workers
- Reduced maintenance
- Low consumption energy (only 90 Kw of installed power)
- Less space required
- Higher flexibility
- High safety (reduced noise, etc) standard
- Reduction of CO2 emission

Features of the line:
- Maximum mechanical speed: 7200m/h
- Length of the line: 90m
  (according to the client’s needs)
- Electrical power installed: 150Kw

The superficial finishing can be
- Polyethylene film high density (H.D.P.E.)
- Sand (100gr/sqm)
- Mineral (slate) (1300gr/sqm)
- Polyester
- Textile
- Aluminium foil
- Embossing
- Shingle design
- Bitumen strip
