

Automatic Winder

A high speed roll winder for rolls of various lengths and up to a maximum diameter of 340mm
The use of belt drives in winder instead of chains has significantly reduced the noise generated by the machine.

The use of belt drives has greatly reduced maintenance and maintenance costs.

Main feature:

- Automatic winding machine
- High speed roll winder
- Servomotor motorized
- Online and offline taping unit
- Special length control device
- Expandable mandrel/spindle
- Accurate and precise length measuring device
- Expandable mandrel/spindle with grip mechanism
